Klarent – Founding Marketing Manager

I'm applying for the Founding Marketing Manager role at Klarent because I have already done answer engine optimization (AEO) work and published it. I ran a 12-search teardown for Binance across six markets in four languages, and I built an open-source audit tool that asks AI assistants the questions buyers ask and records who gets cited. On Arcessio's own site it found that AI crawlers could read fewer than 25 words on 14 of 15 pages. I have been the first or only marketer at SaaS and fintech companies, and I write and ship the work myself.

Search is the other half. At Distrobird, I led five writers and two editors to 3,000+ ranking keywords and 500K monthly impressions in three months. At Reform, an AI-assisted search engine lifted non-branded organic traffic 48%. At Hank Robotics, a technical product with one indexed page, I got to 17 pages and 2,064% more organic sessions in nine weeks.

I ran my audit on Klarent. I asked 30 questions a QA or engineering lead would type, through ChatGPT (using OpenAI's Codex tool), Perplexity, Gemini and Google AI Overviews. On the 18 questions that leave Klarent's name out, such as flaky tests or the best AI testing tools, none of the four engines named Klarent. It shows up only when the question already names it. Mosaic's partner said what convinced the fund was using AI to write tests and not to run them, yet the word "deterministic" does not appear on the homepage, the about page or the FAQ, and the FAQ still uses the old name fore ai. Asheem's flaky-test math makes the case in one line: a test that is right 99% of the time fails at least once in about 63% of 100-test runs. It lives on LinkedIn today. I would move it onto pages that search engines and AI assistants can quote. The full results and a ranked fix list are on the audit page.

My event work runs from a first webinar at FunnelEnvy (41 registrations) to 200+ qualified leads from events and partnerships at Bujeti, and I co-host a Lagos meetup twice a year for 60 to 80 marketers. For technical buyers, I built the Arcessio audit around the questions engineers type into AI assistants.

I work from Lagos. The clock matches Zurich's in winter and runs an hour behind in summer, so European hours are fully covered and US mornings overlap.

I'd like to talk about which fixes should come first.

James Praise

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/klarent.
