vCluster – Head of Content

Cliff,

On 12 November I asked Perplexity eight questions a GPU cloud buyer might ask. vcluster.com was cited as a source in six of the answers, but vCluster was named as a product in only two. It was missing from both questions that asked for a list of vendors. I asked what software a telco can use to launch a sovereign AI cloud on NVIDIA GPUs, and the answer named Rafay. That was three weeks after Deutsche Telekom put DSX OS into production on vCluster. Your sovereign clouds page doesn't mention Deutsche Telekom yet.

The posting says the job starts with an audit of where vCluster stands in search and AI answers, and a plan to grow both. I did the outside part of that audit and wrote it up with sources. It has the eight prompts and answers, the pages I'd fix first and how I'd measure AI referral traffic. It also has an editorial calendar built on the idle GPU and time to revenue themes you write about. Anything that needs Search Console is marked.

I've built content programs from zero before. At Distrobird, a sales engagement software company, I led five writers and two editors and ranked for more than 3,000 keywords in three months. At Reform, I built an AI-assisted search content engine that lifted non-branded organic traffic 48%. At FunnelEnvy I planned and hosted the first webinar and ran the podcast.

I write with Claude every day and check each claim against its source before it ships. That matters when the readers are platform engineers.

I live in Lagos, Nigeria, and I'm open to working as a contractor or through an Employer of Record (EOR). I can start within two weeks.

I'd like to know which of the eight prompts your sales team hears most.

James Praise

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/vcluster.
