Arcessio – Founding Growth Marketing Lead

Arcessio needs someone who has built a marketing function from zero with AI doing the work of a larger team, and I've done that several times. At Bujeti (YC W23), I built the inbound engine it lacked and generated 1,331 marketing qualified leads in six months. At Distrobird, I built a content operation that ranked for 3,000+ keywords within 90 days. At Reform, my AI-assisted search engine optimization (SEO) engine scaled content output 100x, and at FunnelEnvy I built agentic infrastructure that turns one content asset into 10+ channel outputs.

Two are closest to Arcessio's situation. At Hank Robotics, a pre-commercial robotics company, I built positioning and SEO from scratch and grew organic sessions 2,064% in nine weeks. At MIA GTM, my own go-to-market (GTM) business, I built the positioning, a prospect data engine and live outbound for four B2B niches, each with its own language. I haven't worked in manufacturing or computer-aided design, but I've repeatedly turned technical products into language both engineers and business buyers act on, from repositioning Reform as programmable GTM infrastructure for builders to explaining autonomous drone cleaning to Hank's facility managers.

Before applying, I built a workflow that checks who AI answers cite when engineers ask about quoting and manufacturing. Arcessio appeared in none of the 12 answers, and that's where I'd start.

I work from Lagos and hold a valid passport, and I'll apply for a US business visa for the travel this role expects.

James

P.S. I've created a portfolio focused on this role, including the full audit, at https://jamespraise.xyz/work/arcessio/.
