C Teleport – Demand Generation Engineer

What stood out in your job description is the plan to build an agentic marketing team, AI tooling as core infrastructure rather than an add-on. That's already how I operate: I run a self-hosted n8n instance and over 100 custom AI agent skills in my own daily marketing work (a curated set published at github.com/realjaymes/marketingagentskills), and I've taken organic and AI-assistant visibility from near-zero before, 3,000+ keywords ranked in 90 days for a pre-commercialization robotics company entering a saturated category.

While researching C Teleport, I noticed something specific. Energy & Offshore has the same production quality as Marine and Aircrew, its own solutions page, its own "up to 75%" efficiency claim, and C Teleport paid to exhibit at OEEC 2025, a real budget commitment to that exact vertical. But of 4 full case studies, only 1 touches offshore, and of 15 blog posts since 2018, only 1 mentions it, filed under "maritime" rather than its own category. When I ran the buyer-intent searches an offshore-energy prospect would type, C Teleport didn't surface, while four named competitors did. That's a real investment in sales and events that the demand-gen layer hasn't caught up to yet, exactly the kind of gap I'd want to close first.

I'm based in Lagos, Nigeria. I wanted to flag that directly given the posting is scoped NL-based, my working hours overlap comfortably with CET for a fully remote role, and I'd rather raise it upfront than have it surface as a surprise later in the process.

I put together a demand-gen gap brief for the Energy & Offshore vertical, plus a concept for a self-serve savings calculator built on C Teleport's own efficiency numbers.
