Linux Foundation – Open Source Marketing Specialist

Dear Linux Foundation hiring team,

I build AI agents that run marketing workflows, and I run my own newsletter, content calendar and events on them. Each week, Claude Code skills turn one approved Marketing In Action issue into drafts for Substack, an X Article and a LinkedIn newsletter, and I review every draft before it publishes. A daily job then records each live post in one registry. The newsletter has 5,000+ subscribers across 86 countries and a 47.5% average open rate.

The same setup runs my content calendar. Scheduled agents read X twice a day and send me candidate posts, and approved posts go out at set times on four channels. When I speak at or attend an event, a skill drafts the pre-event and post-event posts for each channel. For Wholesome Girlies, a product I run through Marketing In Action, one capture of each tool becomes a short video in three formats, and 36 of them are live. At FunnelEnvy I built the same pattern for a B2B team, where one approved asset became more than ten distribution outputs. I've published 34 of my 81 agent skills at github.com/realjaymes/marketingagentskills.

I have also run the events these workflows promote. At Bujeti, events and partnerships produced more than 200 of our 1,331 marketing qualified leads in six months. I planned FunnelEnvy's first webinar from scratch, and I co-host Marketing & Chill in Lagos twice a year for 60 to 80 marketers. I report on campaigns from HubSpot and Looker Studio and turn the numbers into recommendations the team can act on.

To show how I would work with a project community, I built a promotion plan around LF Energy's Summit Europe sessions and projects. It uses only public pages, and every source is linked: https://jamespraise.xyz/work/linux-foundation/proof/

I work with distributed teams across time zones every day. I'd like to talk about which projects need the most help first.

James

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/linux-foundation.
