MNTN – GTM Engineer

MNTN's GTM Engineer role centers on email deliverability and lead routing, and I've owned both. At Reform, I led the email platform migration from Userlist to Brevo: email authentication (SPF, DKIM and DMARC), a Kickbox list cleanup from 10,104 to 7,808 contacts, and n8n workflow validation before cutover. Bounce rates fell 18% and email churn fell 22%.

For my own go-to-market business, I built a prospect data pipeline in Python with its own email verifier. Before deciding which leads get sent, I tested enrichment sources against each other and found database-enriched emails far more reliable than scraped ones, so the send rules follow that result. One live run sourced 409 companies and produced 267 send-ready leads.

I haven't used LeanData or Marketo. Each time a pipeline has needed a new tool, I've learned its data model quickly and wired it in.

MNTN's push into small and mid-sized businesses will put more volume through routing and sending than those systems were built for, and that's where I'd want to start.

James

P.S. I've created a portfolio focused on this role at https://jamespraise.xyz/work/mntn/.
