Niuro – GTM Engineer

Carlos, your post about this role says you want to meet people who can show something they've built, explain why it worked and tell you what broke. So I built one for Niuro this week.

It's a scan that reads the public Greenhouse, Ashby and Lever job feeds for 40 US software companies and ranks which ones have engineering roles stuck open. 30 boards answered. 19 of those companies have between 5 and 40 engineering roles open, with at least two that have sat unfilled for two months to a year. All 12 of Attio's open engineering roles are in that window. Vanta has 16 of 27.

The first version was wrong. It counted every role open longer than 60 days as a hiring problem, so Linear came out with nine of them, one posted 2,022 days ago. Those are evergreen posts that companies keep up to collect applicants. I moved anything older than a year into its own bucket that scores nothing, and the ranking started to make sense. The write-up and the code are at jamespraise.xyz/work/niuro/proof.

I work this way on my real systems too. At FunnelEnvy I ran outbound for five client accounts at once on Clay, n8n and Smartlead, and the average client got 102 replies and $151,962 in new pipeline a month. In my own prospect engine, two addresses a database had marked verified bounced on a September send, and my SMTP checker couldn't catch them because port 25 is blocked on my machine. Every address now passes a live deliverability check before it can send. One run of that engine sourced 409 companies and produced 267 send-ready leads.

I work remotely from Lagos as a contractor. Lagos is six hours ahead of US Eastern, so your mornings are my afternoons.

I'd like your feedback on the scan.

James Praise

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/niuro.
