Skylar – GTM Engineer

Building onboarding and activation systems for a small SaaS team is work I've already done. At Reform, a bootstrapped SaaS company, I rebuilt the onboarding and lifecycle funnel and lifted trial activation by 34% and onboarding activation by 18%, then improved trial-to-paid conversion by 21% through a tested Pro Plan trial redesign.

A recurring pattern in my work is joining before a real growth function exists and building the tracking and automation it needs from scratch. I built a data and tracking engine (scraping, enrichment, a self-built email verifier, a QA tool) that ran at production scale, 409 companies sourced and 271 verified emails enriched in one live run, proof I build the instrumentation myself rather than only operate someone else's dashboard.

I haven't sold directly into sales training or sales enablement before, so before applying I verified Skylar's own competitive landscape (Second Nature, Hyperbound, Quantified) against your own current sites and mapped how a sales leader evaluates a tool like this. The closest prior experience I've got is Distrobird, a sales engagement SaaS platform, and CIL, a B2B training provider selling to sales teams across Sub-Saharan Africa. Both gave me a feel for how sales teams evaluate and adopt a tool like Skylar.

Your own numbers say the product lives or dies on weekly habit, 76% weekly usage. That's the exact funnel I'd want to start mapping first.

James

P.S. I've put together a page focused on this role at jamespraise.xyz/work/skylar, including the competitive landscape note.
