The GTM Studio – GTM Engineer

The GTM Engineer role builds enrichment, CRM hygiene and outbound systems for client engagements, and I build and run those systems for my own go-to-market business. At MIA GTM, I run live outbound across four niches, each with its own brief, offer and sequence, so a new segment starts from a template. The data comes from a Python pipeline I built across 10+ sources with its own email verifier and a preview tool that checks every message before it sends. One run sourced 409 agencies and produced 267 send-ready leads.

At FunnelEnvy, I built the outbound stack on Clay that lifted reply rates 27%. At Reform, I led the email platform migration to Brevo, including SPF, DKIM and DMARC setup and a full list cleanup.

I haven't delivered inside someone else's agency before. My own niches run in parallel on shared templates, which is the closest thing I have to multi-client delivery.

You hired your first GTM Engineer last month and opened a second role already. I'd spend my first weeks building the Clay templates and pre-send checks that make the next client faster to launch than the last one.

James

P.S. I've created a portfolio focused on this role at https://jamespraise.xyz/work/the-gtm-studio/.
