PROFESSIONAL SUMMARY

GTM Engineer with 5 years of experience designing, building, and operating revenue systems across B2B and SaaS companies. I build the infrastructure underneath outbound and lifecycle motions myself: custom Python scrapers and enrichment pipelines, self-built email verifiers, n8n automations, and Model Context Protocol (MCP) integrations that connect AI agents to real GTM tools and data. My work has contributed to \$10M+ in qualified pipeline and scalable, self-built outbound and automation systems used by growth and revenue teams. I operate at the intersection of GTM strategy and software engineering, building the systems and the demos that connect product data to what a sales team and a buyer actually see. - Ran the prospect-data engine at production scale for MIA GTM's B2B agencies niche, sourcing 409 Clutch agencies down to 267 send-ready leads through a self-built QA and verification pipeline, and started real conversations with an agency managing director and a GTM engineering firm principal across the agency and Clay Solution Partners niches.
