OpenZeppelin – Lead Product Marketer, Financial Institutions

I'm applying because this role turns six strong buyer pages into proof, kits and launches that Sales can use in a bank's risk review, and that is the work I do best. Founders keep handing me marketing that exists in pieces. I turn it into a system the team can run, and I write it all down as I go.

Before applying, I read every financial-institution page on openzeppelin.com. Each one speaks to its buyer well. All six carry the same two quotes, from WisdomTree and DTCC, and the CACEIS Bank stablecoin story, your best bank proof, isn't on the banks page. I mapped each segment to the strongest proof already public on your site and drafted a bank one-pager in the shape I'd hand Sales: https://jamespraise.xyz/work/openzeppelin/proof/

At Reform, I repositioned the product for technical and business buyers and carried the new message through the pages, the emails and the product. Trial activation rose 34% and trial-to-paid conversion rose 21%. At Bujeti (YC W23), a fintech selling to finance teams, I built product marketing, events and partnerships, with 1,331 marketing qualified leads in six months and a 500% increase in new business customers in one quarter.

I work AI-native every day. Claude Code skills turn each approved issue of my newsletter into drafts for three platforms, and it has reached 5,000+ subscribers at a 47.5% average open rate. My email sequences live as code, and I approve every change before it goes live. I use 82 agent skills for my own marketing and publish 34 of them on GitHub. The same habit fits sales kits that need a version per account and a person signing off.

The S&P Global deal will bring OpenZeppelin into rooms where the first question is who like us has done this. I'd like to help make sure every segment has a ready answer.

What do you think?
