GetBlock – Full-Stack Marketing Manager / Marketing PMM

The AI section of this role describes how I already work. I run my marketing on Claude Code with 81 agent skills I built, and 32 of them are public on GitHub. One of my agents runs every morning before I start work. It reads hiring posts and job boards, then checks each role against a written filter. For every role that passes, it drafts the research, positioning and outreach, and I review the work once a day. This week it marked a run as finished when it had never managed to read LinkedIn. I added a check that holds the run until LinkedIn has actually been searched, and that night's run did it properly.

Most of my product marketing has been for technical buyers. At Reform I repositioned a form builder around lead conversion for a technical and business audience, and trial activation rose 34%. The launch framework I wrote there lifted new feature adoption 26% within 90 days, and I built the partner program on PartnerStack with co-marketing playbooks alongside Clay, Lovable and Claude Code. I also write everything I publish. My newsletter, Marketing In Action, goes out weekly to 5,000+ subscribers at a 47.5% average open rate, and there is no editor above me.

I have written for engineers deciding what to build on. I wrote a draft technical case study for an AI coding agent, rewrote a comparison page for an observability platform, and built a Python tool that asks AI search the questions engineers ask and records who gets cited.

I'd like to talk about the questions the few people who choose an RPC provider ask before they pick one, and how GetBlock answers each of them first.

James

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/getblock.
