HotelRank.ai – GTM Engineer

Building the tool that shows a prospect their own data before asking for anything, then handing sales the version a non-technical buyer can act on, describes work I've already done. A recurring pattern in my career is being the person who builds the growth system from scratch where none exists, and staying hands-on enough to ship the work myself. At Marketing In Action, I built a prospect-to-outbound system that sources, enriches, and personalizes real data before a message goes out, and ran it at production scale for MIA GTM's Clay Solution Partners niche, sourcing 409 Clutch agencies down to 267 send-ready leads and landing real reply engagement from an agency managing director and a GTM engineering firm principal.

For MIA's own DIME product, I built the entire demo and funnel infrastructure from scratch (a custom webinar room, prefill lead capture, full attribution) because EverWebinar and WebinarJam couldn't give me the tracking control the sales motion needed. That's the same call a GTM Engineer makes when the bought tool doesn't fit.

My closest work to hospitality is Arinka Travels, a travel agency where I rebuilt the lifecycle and customer relationship management systems behind their bookings.

Four months after Lighthouse folded HotelRank.ai's visibility data into Connect AI, the founders who understood that product best moved up to build other things. I put together the competitive battlecard your sales team doesn't have yet, Profound, Otterly.ai, and Scrunch AI benchmarked against what HotelRank.ai does differently: it tracks whether a booking lands direct or leaks to an online travel agency, beyond visibility scores alone.

James

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/hotelrank.
