MetaMask – Product Marketing Lead - Trade

MetaMask's own pages disagree on where its Trade products work. The prediction markets support page names 12 blocked countries and the product page names 18. The tokenized stocks product page lists 26 unavailable places and the support page lists 31, and neither matches the Ondo page both link to. I put the four products on one map for 25 countries, marked every cell where the sources split, and wrote a launch order that starts in Nigeria: jamespraise.xyz/work/metamask/proof

I have taken fintech and SaaS products from positioning to launch to lifecycle with numbers attached, mostly in emerging markets. At Bujeti (YC W23), a Nigerian spend management platform, I was Head of Growth and Marketing. We generated 1,331 marketing qualified leads in six months, B2B customers grew 500% in Q1 2024, and the lifecycle redesign cut churn by 10%. At Reform I owned product marketing. The Pro Plan Free Trial launch lifted trial-to-paid conversion 21%, and the launch framework I wrote lifted new feature adoption 26% within 90 days. At Cecure Intelligence I launched an academy across Nigeria, Ghana, Kenya, Rwanda and Angola, with 20,000+ community members.

The launch order in the brief uses that same framework: a priority matrix picks the sequence, then a channel plan covers each wave.

I live in Lagos, so I know the emerging market trader from the inside. In 2021 I put over ₦3 million into crypto through Binance, Bundle and Busha, watched it double, and lost it in the May crash because fear and FOMO set my timing. I know which sentence a retail user skips on the way to a 50x leverage button, and I would write that page with Product and a risk reviewer. I also published a search and AI answer teardown of Binance across six African markets in four languages: jamespraise.xyz/work/binance/proof

I would like to talk about how Trade is explained to the next group of users, starting with Nigeria.

James

P.S. I've created a portfolio focused on this role at jamespraise.xyz/work/metamask.
